

Join AMX University for three new custom-designed courses to train you on everything you need to know to sell, design and install AMX control systems. And for the first time, we are offering a comprehensive Residential Bootcamp that covers it all. Take only the courses you need or take them all at once – IT'S YOUR CHOICE!

STAY AHEAD OF THE CURVE WITH NEW AMX TRAINING DESIGNED JUST FOR YOU!

AMX Essentials

This one-day introductory course teaches the basics that anyone new to AMX needs to know before selling, designing, installing, or programming an AMX system.

AMX Designer

This one-day ACE certification course teaches Designers how to design systems using the new AMX VisualArchitect system design tool – all without writing a line of code.

AMX Installer

This three-day ACE certification course for Installers focuses on the fundamentals of installing an AMX control system using AMX VisualArchitect and diagnostic utilities.

AMX Residential Bootcamp

This course combines the new Essentials, Designer and Installer courses into a single five-day ACE Certification course. It teaches residential dealers of all levels, basic AMX systems from start to finish and how to get a control system up and running from scratch!

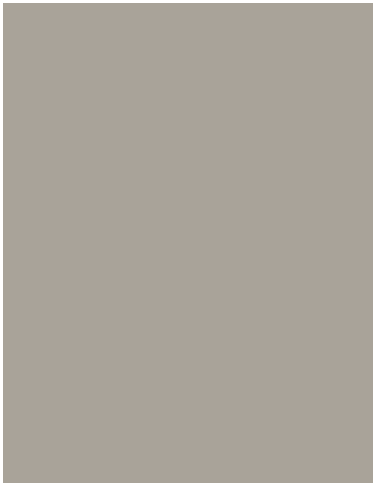

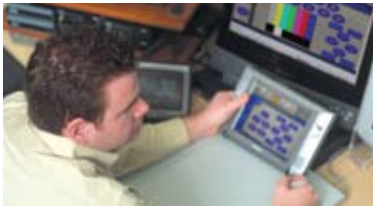

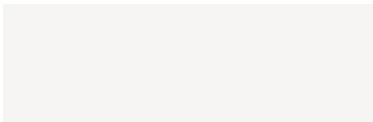

GREAT REASONS TO ATTEND A NEW AMX-U COURSE!

- Commercial Dealers: Whether you sell, design or install – Take ONLY the courses you need
- Residential Dealers: Learn everything you need to design and install in just a week
- Be one of the first to master VisualArchitect
- Quick path to become ACE certified
- Cutting-edge information you can't get anywhere else
- The control industry is evolving – Keep your skills razor sharp
- ABSOLUTELY FREE courses that increase your marketability

COMPLETE AMX-U COURSE DETAILS

AMX Essentials

This one-day introductory course offers you an exciting look at the capabilities of AMX products and control systems. Learn the basics you need to know before selling, designing, installing, or programming an AMX system. We will explain the basics of control systems, as well as give you hands-on experience with AMX products, network diagnostic utilities, and AMX software tools you use to develop control systems.

If you have an interest in learning more about AMX, this course is for you!

(Note: If you are new to AMX, the AMX Essentials course is highly recommended before you pursue any ACE certification. Course pre-requisites are also required. See AMX.com/training for complete details, course locations and schedule.)

AMX Designer

This one-day ACE certification course for Designers gives you the tools and knowledge necessary to effectively design control systems using AMX VisualArchitect, a feature-rich tool you will use to design a basic control system and automatically generate the files your control system needs – all without writing a line of code. Come learn the steps and critical concepts required in the design of an AMX control system, including touch panel and keypad designs and system power requirements. You will spend the day gaining hands-on experience with AMX VisualArchitect, and you will leave with a design checklist that will help you plan your next job.

During the AMX Designer course, you will complete a practical exam and an online test covering the information you learned in class. Upon successful completion of both, you will earn the ACE Designer certification.

(Note: If you are new to AMX, the AMX Essentials course is highly recommended before you pursue any ACE certification. Course pre-requisites are also required. See AMX.com/training for complete details, course locations and schedule.)

AMX Installer

This three-day ACE certification course for Installers focuses on the fundamentals of installing an AMX control system through hands-on experience with AMX VisualArchitect and diagnostic utilities. Learn to configure devices, connect a control system, provide system security and remote management, build cables, transfer files, and troubleshoot a control system.

During the AMX Installer course, you will complete a practical exam and an online test covering the information you learned in class. Upon successful completion of both, you will earn the ACE Installer certification.

(Note: If you are new to AMX, the AMX Essentials course is highly recommended before you pursue any ACE certification. Course pre-requisites are also required. See AMX.com/training for complete details, course locations and schedule.)

AMX Residential Bootcamp

This five-day ACE Certification course is designed for residential dealers of all levels who want to understand basic AMX control systems from beginning to end. This comprehensive course will take you through the basics of AMX and control systems, teach you how to effectively design a residential control system using AMX VisualArchitect, and generate all the required code for the control system and user interfaces to get the project up and running. You will gain hands-on experience with AMX products and software packages, as well as learn what you need for control system cabling, installation, and troubleshooting. This end-to-end class allows you to quickly get a control system up and running from scratch!

During the AMX Residential Bootcamp course, you will complete two practical exams and two online tests covering the information you learned in class. Upon successful completion, you will earn two ACE certifications – ACE Designer and ACE Installer.

(Note: AMX Essentials is included in the AMX Residential Bootcamp, so you do not need to take the AMX Essentials course separately. See AMX.com/training for complete details, course locations and schedule.)
