

Introducing the New & Improved
NETLIX STUDIO
 NEW Version 3

INCLUDING OVER 20 NEW/UPDATED FEATURES:

- NEW MODERN MICROSOFT® LOOK AND FEEL
- WORKS WITH MICROSOFT® VISTA® AND MICROSOFT® XP® (SP2)
- NEW ZEROCONFIG TAB EASILY LOCATES DEVICES
- NEW TELNET REMOTE COMMAND CONSOLE

The latest Version 3 is packed full of enhancements designed to make it easier to integrate, program, organize and support all of your system programming needs utilizing the NetLinx architecture. As the cornerstone of our system design software tools, NetLinx Studio offers programmers the most flexible

application capable of generating the most sophisticated code possible. This release also shows our commitment to ongoing development of this flagship application. For more information, visit www.amx.com/products/netlinxstudio.asp

Now available within NetLinx Studio, launch and run this console for direct command line interaction with networked devices to emulate, test, troubleshoot and configure system functionality.

Simply click on the tab, within NetLinx Studio, and automatically link to networked devices without knowing/needng device IP addresses, special serial cables, or product-specific software - effectively extending your workspace. Now you no longer need to run Bonjour from your browser window - it's built into NetLinx Studio.

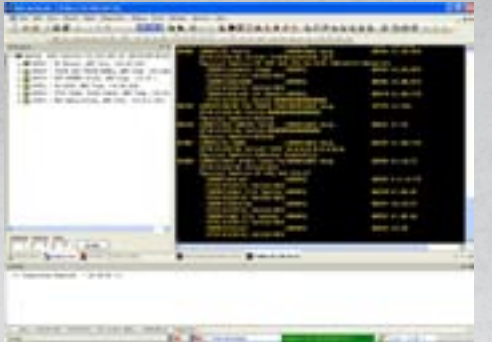

Simplified IR file functions display

Easier JAR File transfers, improved bookmarking, and more diagnostic tools

Works with Vista

Zero Config

Telnet

Create macros within the editor then recall and play them back
