VARIA-SL80 Installation
The VARIA-SL80 installs into a standard electrical single gang box (US, UK, EU, AU) using the included mounting plate.

Power Over Ethernet
Power is supplied via Power Over Ethernet (PoE), utilizing an AMX certified PoE injector such as the PS-POE-AF-TC PoE Injector (FG423-83) or compatible network switch which is classified as ES1 and PS2 output in accordance with IEC/EN/UL 62368-1. Connect the incoming Ethernet cable to the RJ-45 port on the VARIA-SL80.

Mounting Plate
The included mounting plate contains hole patterns for standard single gang electrical boxes in US, UK, EU, & AU.

FIG. 2 Mounting Plate

STEP 1: Installation Prerequisites
Prior to touch panel installation, install single gang electrical box and properly terminated category cable (networking cable) in accordance with local laws and building codes.

STEP 2: Install the Mounting Plate
Screw the mounting plate into standard single gang electrical box using appropriate hardware for the box.

STEP 3: Route Category Cable
Route the networking cable through the large central hole in the mounting plate, and plug it into the RJ-45 jack on the back of the touch panel.

STEP 4: Mount the Panel to Plate
Using the top tab & slot, insert the panel to the mounting plate. Make sure the tabs are fully engaged.

STEP 5: Set Screw
Insert & tighten the set screw on the bottom to secure the panel to the mounting plate.

FIG. 3 Back Box Installation Examples

Caution: This product is only suitable for installations less than or equal to 2m (6.56ft) high for CE/UL safety.

Removing
To remove the panel, follow the installation directions in reverse.
Powering On & Panel Setup Wizard

Powering on for the first time (or after a factory reset) will launch a setup wizard where device settings and the panel’s persona are selected. After being selected, the panel will boot to that persona on each subsequent power cycle or reboot.

1. Select your language
2. Select your time zone, date, & time
3. Set up your network
4. Select your panel’s persona:
   - **Web Kiosk**: The touch panel is set up to display a web URL on a full-screen HTML5 browser.
   - **Zoom Rooms Controller**: The touch panel is set up to control a Zoom Rooms space.
   - **AMX Book Scheduling**: The touch panel is set up for room scheduling, connecting to Microsoft Exchange, O365, or Google Calendar.
   - **AMX G5 Control**: The touch panel is set up for AMX NetLinx control, utilizing a TP5 file created using TPDesign5.

![Select App page in the Setup Wizard](image)

The persona can be changed at any time in the Advanced Settings menu.

Each selection requires its own setup. After confirming your app selection, the panel will continue to step through setup for the selected persona. Full step-by-step walkthroughs can be found in the **AMX Varia Programming & Configuration Guide** available on AMX.com.

![Panel Buttons’ Location](image)

The Function Button serves multiple purposes:

1. A quick press & release will turn the panel’s display on & off (i.e. sleep & wake).
2. A press & hold for 4 seconds will return to the primary persona. This is useful if another app had been loaded on top of the panel’s primary persona app.
3. If the panel is shut down, pressing the Function button will boot up the panel.
4. If the Function button is pressed & held during the boot process, the panel will launch into Safe Mode.

The Settings Button

The touch panel has a pin-hole button which serves two purposes:

1. A quick press & release will open Panel Settings
2. A press & hold for 4 seconds will reboot the panel

The default PIN to access Panel Settings is **1988**.

**NOTE**: Do not confuse the Settings button (pin-hole button) with any of the microphone or sensor holes. The Settings button is the larger hole located closest to the Function Button. Irreparable damage may occur if a foreign object is pushed down the microphone hole or into one of the sensors.

![Panel Camera & Sensor Locations](image)

The ambient light sensor can automatically adjust panel brightness based on the environment. See Display Settings to enable automatic brightness.

The laser proximity sensor will detect nearby motion to wake the panel up without requiring a touch.
