Google Meet Room with AMX and Logitech

OPPORTUNITY

Google Meet is a leading collaboration and communications platform within enterprise and educational institutions. Organizations that standardize on Google Meet to connect their employees and customers are seeking simple-to-use meeting spaces with consistent user interfaces to enhance user productivity.

While Google Meet provides an excellent collaboration experience and a simple-to-use interface, it lacks the ability to control non-Google Meet devices. Though smaller spaces may not require more than a camera and soundbar, larger spaces often require additional equipment to deliver optimal audio and video clarity to all the meeting participants. For meeting spaces to incorporate sophisticated video switching, audio routing, or environmental systems, a separate control system is required.

SOLUTION

AMX worked together with Logitech, a leading Google Meet Certified hardware manufacturer, to develop complementary technologies that enable customizable AMX control pages to be seamlessly added to the Google Meet Rooms UI running on the Logitech Tap.

With the addition of an AMX NX Controller to any Google Meet solution, control for lighting, temperature control, AV, and more can be added to a Meet Room while preserving the look and feel of the standard Meet UI.

The custom control UI, enabled through the collaboration between Logitech and AMX, makes it simple to switch between table inputs to determine which laptop will be shared in the Meet call as well as the ability to control other room systems such as lighting and temperature control.
