

APPLICATION BRIEF

CORPORATE

Meeting Space with AMX Acendo and Conferencing Connectivity Kit

OPPORTUNITY

It is hard to predict what presentation methods attendees prefer, and what devices they will bring to meetings. These preference variances, along with budget considerations and so many so many available device options creates corporate work environments that need to support the technology associated with a variety of work flow styles.

SOLUTION

The AMX Connectivity and Transport Kit for Conferencing is a 4K switching and distribution kit that combines switching, scaling and distance transport into a single kit that includes both a transmitter and receiver and combines multi-format video switching, scaling and distance transport with USB 2.0 peripheral switching, allowing dynamic sharing of room USB peripherals between visiting laptops, etc., and in-room devices.

Simply connect a visiting device, such as a laptop, to the transmitter at the table, the room projector or display is automatically turned on, and the signal is automatically transmitted and scaled for optimal viewing. In addition, the kit connects USB for any peripheral device, such as in room conferencing soundbar such as Acendo Vibe, to the visiting laptop. The receiver has a second input for a room PC or wireless sharing device such as AMX Acendo Core. If a source, such as a room PC, is connected to the receiver the kit still automatically switches to the visiting laptop when it is connected, and returns to the room PC when the laptop is disconnected. This creates a decision-free experience for the user where they plug in a device and go.

AMX Connectivity and Transport Kits for Presentation and Conferencing

The AMX Connectivity and Transport (CT) Series allow in-room and visiting devices to easily share meeting spaces. Available in a Presentation Kit and Conference Kit, each includes a transmitter and receiver that deliver 4K content, with automatic switching, scaling, and distance transport. The Conference Kit adds USB 2.0 peripheral switching, allowing dynamic sharing of room USB peripherals between visiting and in-room devices.
