EDUCATION

Simple Classroom with Cost Effective Presentation Kit

OPPORTUNITY

Small classrooms, overflow classrooms, temporary classrooms, and even staff meeting spaces may not get a big enough piece of the campus budget to be outfitted with the full technology suite dedicated to larger classrooms and auditoriums; yet these spaces still need an effective and intuitive way to present content.
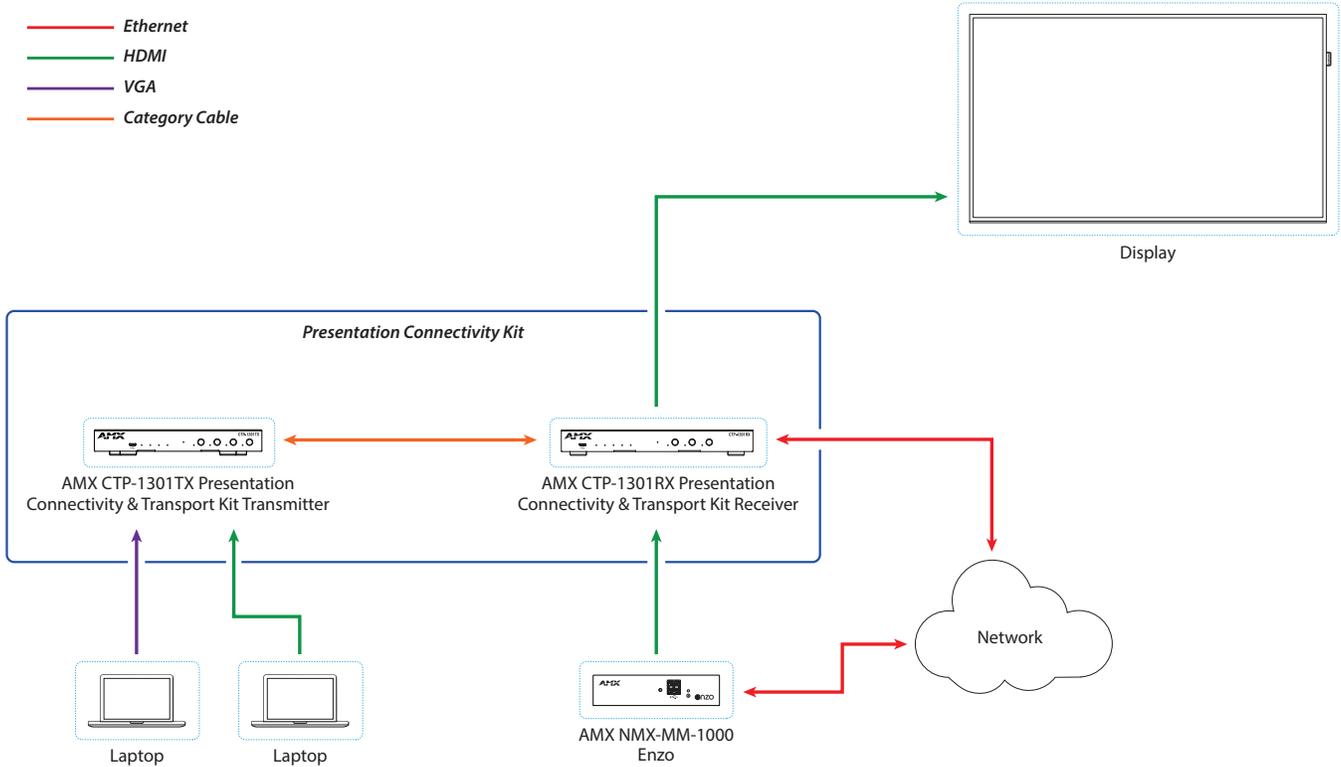

SOLUTION

To address the needs of simple presentation environments, the AMX Connectivity and Transport Kit for Presentations is a 4K switching and distribution kit that combines switching, scaling, and distance transport into a single kit that includes both a transmitter and receiver.

Simply connect a laptop to the transmitter at the podium or table, the room projector or display is automatically turned on, and the signal is automatically transmitted and scaled for optimal viewing. The receiver has a second input for a room PC or wireless sharing device such as AMX Enzo. If a source, such as a room PC, is connected to the receiver the kit still automatically switches to the visiting laptop when it is connected.

The AMX Connectivity and Transport Kit delivers added value and flexibility by providing a single, easy to implement solution that offers switching and connectivity where you need it along with unified control of both the transmitter and receiver—all over a single category cable.

AMX Connectivity and Transport Kits for Presentation and Conferencing

The AMX Connectivity and Transport (CT) Series allow in-room and visiting devices to easily share meeting spaces. Available in a Presentation Kit and Conference Kit, each includes a transmitter and receiver that deliver 4K content, with automatic switching, scaling, and distance transport. The Conference Kit adds USB 2.0 peripheral switching, allowing dynamic sharing of room USB peripherals between visiting and in-room devices.

AMX Enzo Presentation System

Enzo enables easy content sharing with quick access to presentations, photos, videos and other documents. With the integration of MirrorOp® real-time screen mirroring technology, users can wirelessly share content from their devices. With a built-in web browser, Enzo can also display documents and content that is located in cloud storage, or the internet. It also has a USB port for direct connection.
